

Weekly Account Status Update

Brand A – FreshBasket (Organic Snacks) Ad spend ₹2.5L/month, ROAS 4.2 — performing well, client satisfied. No performance issues this week. However, the client asked on Tuesday: *"Can you explain what the daily spend breakdown means in the report? I don't understand the columns."*

Brand B – UrbanPulse (Men's Grooming) Ad spend ₹4L/month, ROAS 2.1 — below target of 3.0. Month 2 of engagement, algorithm still in learning phase. Completed deep keyword restructuring, negative keyword audit, and competitive analysis this week (12 hours invested). Client emailed expressing concern: *"Are we sure this is working?"* — drafted a response managing expectations. Flag: product listing images are noticeably weaker than top competitors in the same category. This will limit CTR and conversion regardless of bid strategy.

Brand C – NestWell (Home Fragrances) Ad spend ₹1.8L/month, ROAS 3.5 — on target, routine week. Monthly report in progress. Client asked on Wednesday: *"Can you explain what the daily spend breakdown means? The columns are confusing."*

Cross-Account Patterns — Flagging to Team Lead:

1. Report Design Problem: Brand A and Brand C asked the identical question about report columns this week. Two out of three clients cannot read our standard report. This is not a client issue — it is a report design issue. I recommend we simplify column headers before next week's send.

2. Invisible Effort on Brand B: I invested 12 hours on UrbanPulse this week — nearly double any other account — but the client feels nothing is happening. Invisible effort leads to churn. I suggest sending a mid-week progress email to this client going forward to make work visible.

3. Missed Opportunity on NestWell: Brand C has an active Flipkart store but zero Flipkart advertising. No one has raised this. It is either a cross-sell opportunity or at minimum a question worth asking the client.

Task 3B — MD Talking Points: UrbanPulse (Men's Grooming)

Brand chosen: Brand B – UrbanPulse

Opening Context: UrbanPulse is currently spending ₹4L/month on Amazon ads. We are in Month 2. ROAS is at 2.1 against a target of 3.0 — this is expected during the algorithm learning phase and not a cause for alarm.

What I want to discuss with the MD:

- 1. Revenue Trajectory:** Where does the MD want Amazon to be in 6 months — is the goal topline growth or margin improvement? This shapes our entire strategy.

2. **The Listing Problem:** Your product images are weaker than the top 3 competitors in men's grooming. Ads drive traffic but listings convert it. A listing upgrade (photography + A+ content) could improve conversion 15-20% — that directly improves ROAS without touching ad spend.
3. **Flipkart Opportunity:** Your Flipkart store is live but unadvertised. Men's grooming is a strong category on Flipkart and ad costs there are currently lower than Amazon. A ₹1L/month test budget could add ₹3-5L/month in incremental revenue.

Questions I would ask the MD:

- What is your topline revenue target for e-commerce this year?
- Is there budget appetite for listing upgrades alongside ad spend?
- Have you considered Flipkart as a second channel this quarter?
